

Unit 4 IT – Practical Exam Checklist

Use this checklist to ensure you can perform all required practical skills before your exam.

1. Create & Structure a Database

- Create tables from a scenario
- Define fields and data types
- Set primary keys and foreign keys
- Link tables and enforce referential integrity

2. Relationships

- Create one-to-many relationships
- Handle many-to-many using junction tables
- Understand how foreign keys link tables

3. Validation

- Apply presence, range, length, and format checks
- Use lookup lists (dropdowns)
- Write clear error messages

4. Queries

- Basic queries: =, >, <, AND, OR, NOT
- Advanced: wildcards, parameter queries, calculated fields
- Aggregate: SUM, AVG, COUNT, MIN, MAX
- Conditional queries using IIF
- Action queries: update, delete, append

5. Reports

- Create reports from queries
- Add titles, labels, and calculations
- Apply formatting and grouping

6. Charts

- Create column, pie, and multi-series charts

- Add titles, axis labels, and formatting

7. Forms

- Create data entry forms
- Add dropdowns and validation
- Create edit forms with search functionality

8. Automation

- Create buttons for actions (save, open forms)
- Use simple macros and conditional logic

9. Import / Export

- Import data from CSV, TXT, Excel
- Export data to PDF, CSV, Excel

10. Testing

- Create a test plan with test data and expected results
- Use valid, invalid, extreme, and erroneous data
- Record actual results and corrections

Final Readiness Checklist

- Can build a full database from a scenario
- Can apply validation correctly
- Can create all types of queries
- Can generate reports and charts
- Can create and use forms
- Can perform testing with a proper plan
