SUMMARY

I'm Dulran Samarasinghe — a Junior Software Developer and Computer Science student passionate about building high-performing, scalable applications for startups.

I combine AI automation, social media marketing, and eCommerce development expertise to help businesses grow and streamline operations.

I specialize in crafting clean, responsive web apps optimized for both design and performance.

EDUCATION

Bachelor of Science in Computer Science, University of Westminster

Sep '22 — Jul '25

Foundation degree in Foundation degree, APIIT

Oct '21 — May '22

PROJECTS

Digitalizing Sisira Auto Parts [Link](#)

Present

- Helping my friend transform his business from offline to online — building a properly engineered, fully scalable web application tailored to every need of the business.
- Setting up a strong social media presence, digitizing physical records into clean CSV databases, and training AI models to reduce errors and maximize profits.
- We're also automating key processes with Ai, like responding to customers based on historical data from CSV records.
- From spreadsheets to smart systems — we're future-proofing everything.

LankaSupply (Testing an MVP) [Link](#)

- At LankaSupply, I'm committed to supporting Sri Lankan entrepreneurs by helping them discover a wide range of reliable suppliers tailored to their unique business needs.
- From product sourcing to packaging, logistics, and beyond, my mission is to make every part of the business process smoother, more efficient, and built on trusted connections.
- I'm also working to grow LankaSupply into a full-service.

LankaMods [Link](#)

- As a passionate car modification enthusiast, I've developed an MVP Next.js web application designed to transform how modified cars and custom parts are showcased in Sri Lanka.
- Key Features: Explore Modified Car Listings – Browse a curated selection of modded cars with high-quality images and detailed descriptions.
- Direct Access to Custom Parts – Each listing includes clickable purchase links for every part used, making it effortless for enthusiasts to replicate builds.
- Admin Dashboard for Seamless Management – A dedicated backend interface ensures easy control over listings and partnerships.
- The Vision: This platform is built to partner with Sri Lankan car modding businesses, providing them with an exclusive space to display their best builds while directly linking to the parts they sell.
- Unlike automated marketplaces, every listing is carefully curated through strategic partnerships, ensuring authenticity and quality.
- By working directly with businesses, we enable an affiliate-based revenue model that benefits both car enthusiasts and vendors.

Sparkshift (Terminated project) [Link](#)

- I developed a sleek and professional website for SparkShift, a Social Media Marketing Agency (SMMA).
- The site features an automated contact form that streamlines client inquiries, making it easy for potential customers to connect with the agency effortlessly.

SpeedLabs [Link](#)

- Developed a simple and effective website for SpeedLabs Free to streamline client interactions.
- The website features a Contact Us form that instantly notifies the business owner of new client inquiries via email.

MSS Trading Alert Bot (15m timeframe) - Personal Project [Link](#)

- A Python-based trading bot that scans for 15m MSS setups within 4H combo structures every 15 minutes.
- It sends detailed alerts to Discord text channels via webhooks, providing real-time trading insights.

Syndicate [Link](#)

- I'm super excited to share that I designed and built the landing page for Syndicate!
- We wanted something sleek, modern, and easy to navigate to showcase our software development and marketing services.

LankanArt (MVP Test) [Link](#)

- A vibrant, simplified, straight-to-the-point online marketplace for Sri Lankan artists to showcase and sell their artwork.

SKILLS

Software Development Software Development, Fullstack Performance based Web Development
